MDP and FDB lightning barriers

Safety for data and control systems in plants and industrial and potentially explosive areas

THINK CONNECTED.

Data and control systems
are omnipresent in modern buildings
and plants.

OBO protection devices reliably
protect sensitive components.

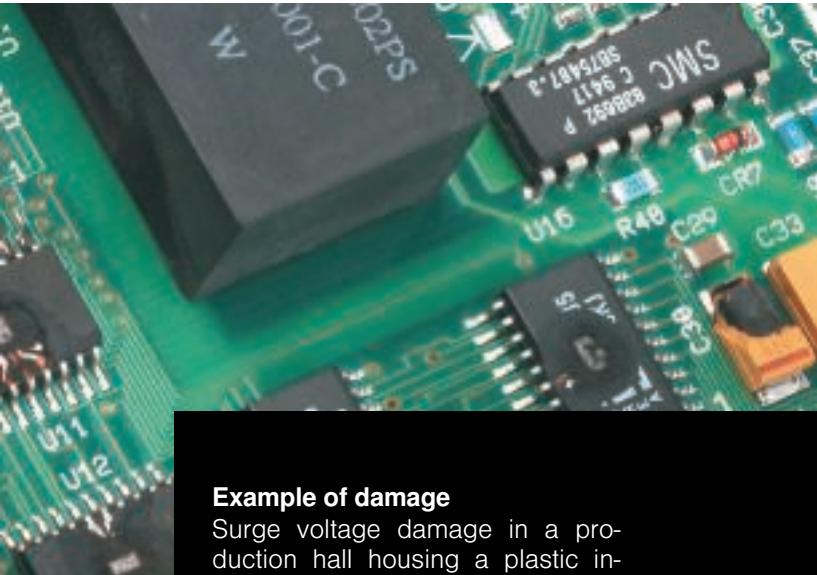

Surge protection guarantees plant availability

Measurement and control technology and fieldbus systems allow automated control of production lines or remote monitoring of many different types of sensors and actuators. Today, this technology forms the core of any modern industrial company. Their failure would result in high financial losses. To prevent this, the systems must be protected against surge voltages from inductive and capacitive couplings. OBO can offer reliable protection of the electronic system with a broad portfolio of surge protection devices and lightning arrestors.

Additional areas of application

- Water supply
- Wastewater treatment plants
- Wind power
- Production
- Industry
- Refineries, oil and gas industry
- Tunnels
- Office buildings

Example of damage

Surge voltage damage in a production hall housing a plastic injection moulding facility and adjoining office area: A lightning strike on a 10 kV medium voltage overhead power line 500 metres away, leading to surge damage to the injection moulding plant's control circuitry. The resultant costs stretch to hundreds of thousands of euros.

€250
Control circuitry

€20,000
Computers and servers

€500,000
Production outage

The plus of the MDP family

Besides the high current capacity, the lightning barriers of type MDP offer a narrow installation width of just 8.7 mm. A separate screen connection permits shield attachment of the equipotential bonding, thus optimising the shield effect against capacitive and inductive couplings. Depending on the version, a nominal current of up to 10 A can be applied to the devices, meaning that they are thus ideally suited to use in special applications, such as measuring and heating systems in wind power systems.

Wide area of use

High frequency bandwidth up to 100 MHz

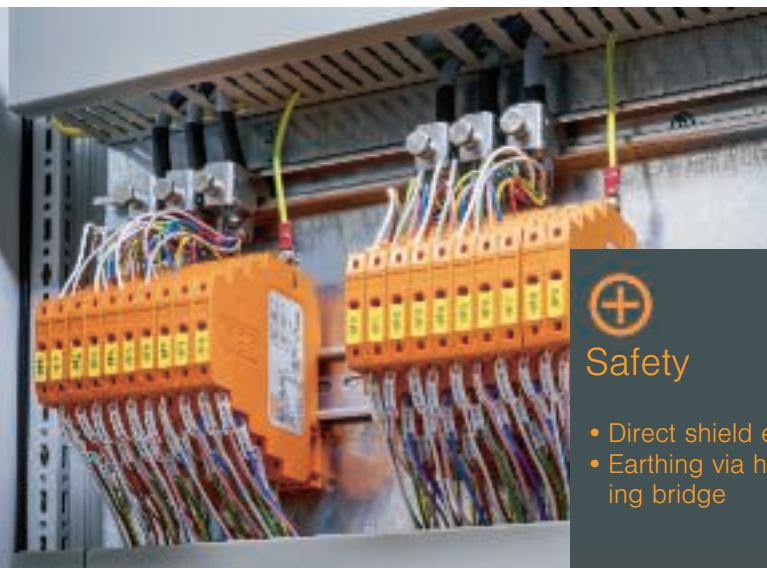

Versatile

- 2, 3, 4-pin
- 5 V, 12 V, 24 V, 48 V voltage
- Up to 10 A load current

Powerful:

- Lightning arrestor
Up to 2 kA (D1: 10/350)
- Surge arrestors up to 10 kA (I_{To-tal} : 8/20)

Safety

- Direct shield earthing
- Earthing via hat rail or connecting bridge

Space-saving

Narrow installation width of 8.7 mm

Tested

- According to IEC 61643-21
- UL-listed (4DG1)

Testable

Testable with Life Control when installed and during operation

Easy mounting

Connection with screwless spring terminals

The plus of the MDP family for Ex areas

Surge protection in potentially explosive areas is an important topic. Here, it is important to protect costly measuring technology against the influence of surge voltages through atmospheric discharge. OBO lightning barriers are tested for intrinsic safety (ia) and are independently certified. With a high arresting capacity of 10 kA, they offer optimum protection for four-pole measurement and control applications. Different voltage variants offer a wide range of applications.

Versatile

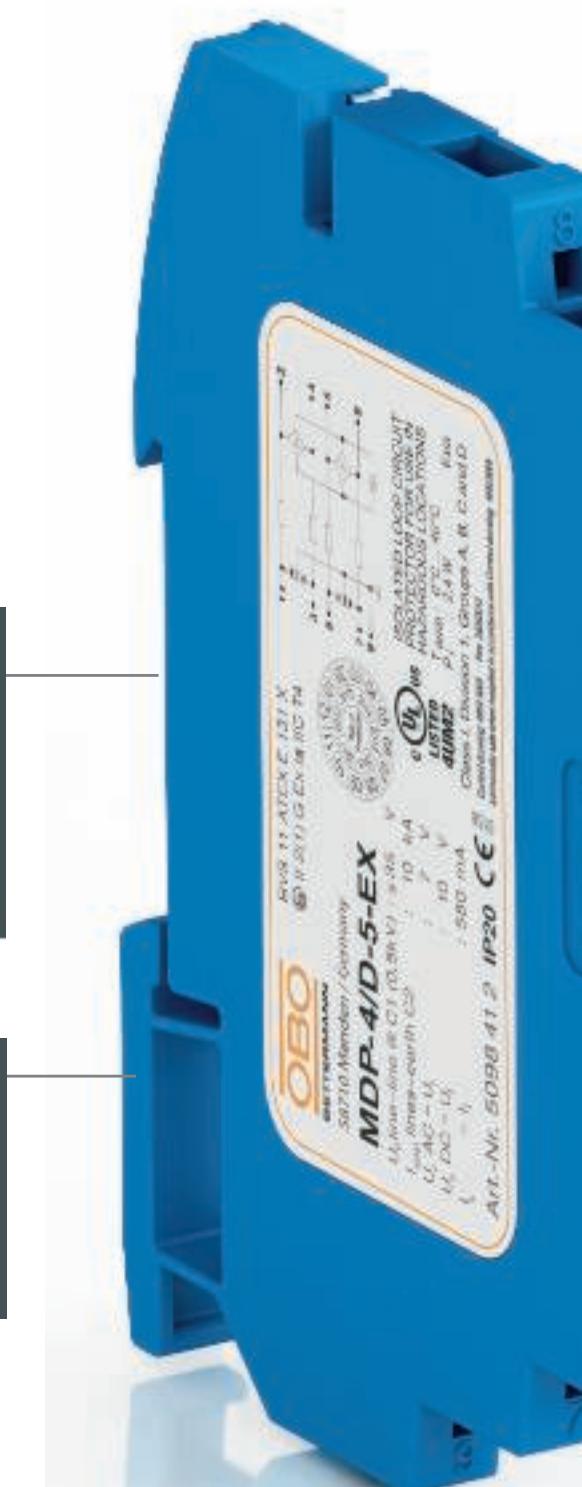

- 5 V, 24 V, 48 V voltage
- Up to 580 mA load current

Powerful:

- Lightning arrestors up to 2 kA (D1: 10/350)
- Surge arrestors up to 10 kA (I_{To-tal} : 8/20)

Wide area of use

High frequency bandwidth up to 100 MHz

Approved

- Can be used in intrinsically safe Ex (ia) circuits
- Ex II 2(1) G Ex ia IIC T4

Certified

by Dekra (ATEX) and the Fieldbus Foundation

The plus of the Petrol Field Protector family

In the Petrol Field Protector for data cable protection device, OBO Bettermann can offer a surge protection device for sensors in potentially explosive areas. The protector permits two or three-pole protection for all kinds of sensors. The protection device can be fastened directly on the sensor and wired in using the appropriate metric or NPT thread. The robust stainless steel housing means that aggressive atmospheres are no problem. The intrinsic safety of the Petrol Field Protector has been independently tested and certified. It offers safety and availability wherever effective surge protection is required for safety-relevant applications.

Direct connection

- Can be used directly on the sensor
- Metric or NPT thread

Refittable

The Petrol Field Protector can be mounted in unused cable glands.

Approved

- Pressure-resistant encapsulation
Ex (d)
- Ex 2(1) G Ex ia IIC T6

Tested safety

The surge protection devices of the MDP and FDB series are tested for the fieldbuses Profibus (PA/DP) and Foundation Fieldbus. The blue MDPs have UL approval and, as with FDBs, are approved for use in areas at risk of explosion.

TESTED

11/11/2014

02 TBS_BI

The BET Test Centre

Lightning is on the menu at OBO Bettermann's own Test Centre. The lightning protection experts here test lightning and surge protection components. Scientific studies are also conducted to investigate the effect of lightning events.

High-end equipment

The BET Test Centre has a test generator that can conduct lightning current tests at up to 200 kA, and a hybrid generator for surge voltage tests at up to 20 kV. Both generators were developed in conjunction with Soest University of Applied Sciences.

Standard-compliant testing

Top of the agenda at the Test Centre is the expert testing of OBO's transient and lightning protection. This includes testing newly developed products, modifying existing products and comparing lightning protection components, surge protection equipment and lightning arrestors. The surge arrestors and all of our protective equipment for data and telecommunications lines are tested in accordance with IEC and national standards.

Overview

Here, you can find the right protection for the most common interfaces

Interface	Ex	Max. voltage	Operating current	Number of wires	Recommended MDP type	Article number

Technical information

Earth connection on the MDP

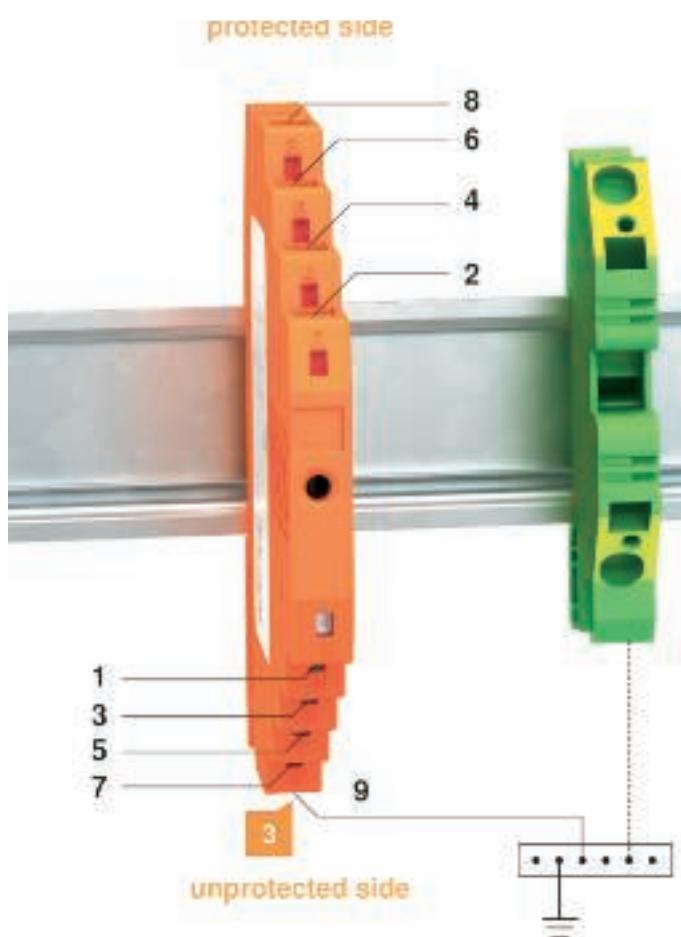

The MDP offers various options for creating the equipotential bonding:

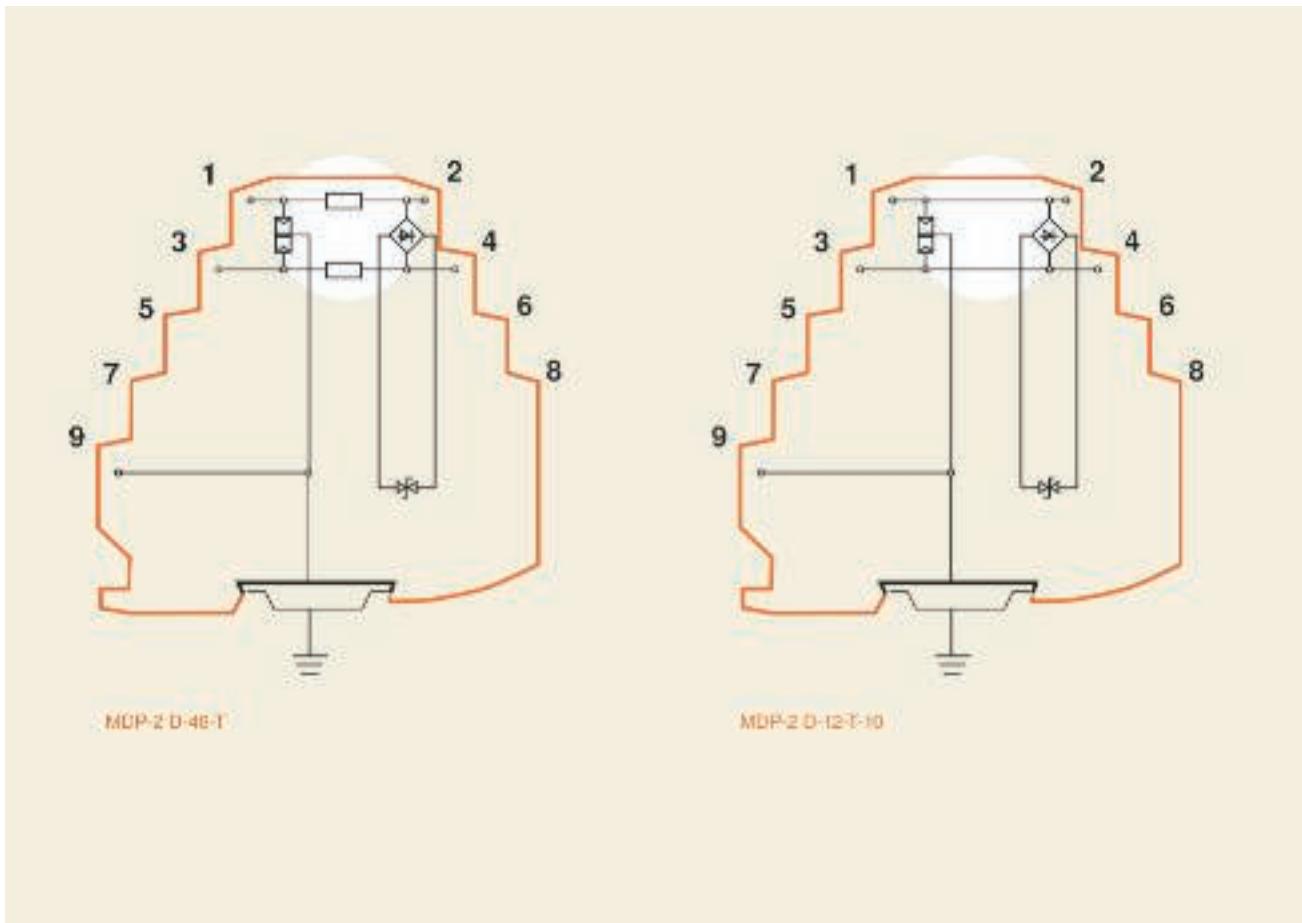

1. Earthing via hat rail (recommended), if the hat rail is integrated in the equipotential bonding
2. Joint earthing of multiple MDP devices via flat copper conductor
3. Earthing via separate earthing line

Installation direction of the MDP

As the MDP is a multilevel protection device, the correct installation direction must be ensured for safe operation. The protected side must always be installed toward the device to be protected. Otherwise, an excessively high current could destroy the diode in Differential mode or in Common mode.

Left: Protection device with decoupling (rated load current: 580 mA), right: Protection device without decoupling (rated load current: 10 A)

Difference between standard solution and 10 A solution

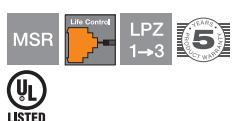

The 10 A solution is available for MDP applications in systems with high rated load currents (e.g. heated wind sensor). The technical difference is that, in the 10 A solution, the copper areas on the board were enlarged and there are no decoupling resistors.

Function testing

OBO Life Control allows function testing of the lightning barriers of type MDP. The lightning barriers can be tested whilst installed. The measuring signal is not influenced by this. Life Control possesses an integrated OLED with a visual and acoustic defect signal and a separately switchable LED for illumination on the testing pin.

MCR protection for multi-wire systems (testable)

MDP... D-5-T: Lightning barrier with test function; 5 V version

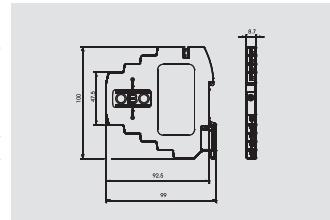

- Nominal load current 0.58 A
- Protection device for multi-wire systems
- Direct shield earthing and screwless connection terminals
- Space-saving width of just 8.7 mm
- Protection circuit testable with Life Control
- High bandwidth to 100 MHz
- UL-listed (4DG1)

Application: Universal use on 35 mm hat profile rail in any standard distribution housing.

MCR protection for multi-wire systems (testable) to 10 A

MDP... D-12-T-10: Lightning barrier with test function; 12 V version

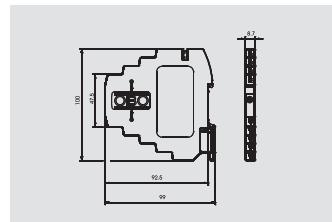

- Nominal load current 10 A
- Protection device for multi-wire systems
- Direct shield earthing and screwless connection terminals
- Space-saving width of just 8.7 mm
- Protection circuit testable with Life Control
- High bandwidth to 100 MHz
- UL-listed (4DG1)

Application: Universal use on 35 mm hat profile rail in any standard distribution housing.

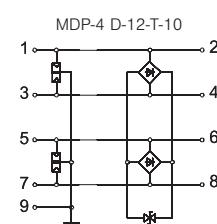

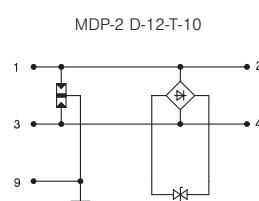

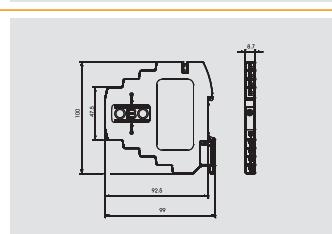

Series protection device, 2-pole, 12 V version

MCR protection for multi-wire systems (testable) to 10 A

MDP... D-24-T-10: Lightning barrier with test function; 24 V version

- Nominal load current 10 A
- Protection device for multi-wire systems
- Direct shield earthing and screwless connection terminals
- Space-saving width of just 8.7 mm
- Protection circuit testable with Life Control
- High bandwidth to 100 MHz
- UL-listed (4DG1)

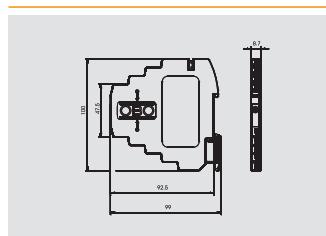

Application: Universal use on 35 mm hat profile rail in any standard distribution housing.

MCR protection for explosive areas

Data cable protection devices for intrinsically safe measuring circuits and bus systems

- Different connection systems available (metric/NPT)
- Low protection level at high current load
- Easy mounting on field devices
- Negligible internal capacitance and inductance
- Stainless steel housing with pressure-resistant encapsulation
- Ex-tested: Ex II 2(1) G Ex ia IIC T6 (BVS 10 ATEX E 48)

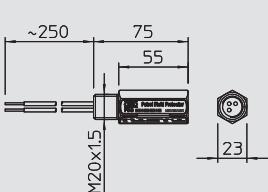

Application: Flow sensors, temperature sensors

OBO Life Control allows function control of the MDP lightning barriers. The lightning barriers can be checked while installed. Life Control will not have any influences on the measuring signal. Life Control possesses an integrated OLED with visual and acoustic defect signalling. A separate LED inside the testing pin is also integrated. Life Control is delivered in a case, complete with a CD and instructions.

Local around the world.

3,000 employees. Over 60 countries.
40 subsidiaries.

The values of our company are supported by continuous proximity to our customers. For us, customer proximity means that whenever borders open and new markets are created, we will be there. This regional proximity has proved its worth: OBO is present on every continent - with more than 2,200 employees in over 60 countries.

OBO
BETTERMANN

Certified safety

Our high-quality range of products and services is globally certified and fulfils all the key international standards. This simplifies the planning and execution of deployments around the world and ensures cost optimisation. Efficient processes at OBO ensure that products are available at the right time. It doesn't matter where our customers are erecting or operating systems.

Experience with major projects

When the building size and the challenge of use increases, the complexity of the electrical infrastructure also increases. For decades, our electrical systems have contributed to the success of major projects. The comprehensive product range allows precise matching to the appropriate deployment location. Our customers can profit from the matching service process, which stretches from project planning through to delivery and consultation on the construction site.
